Subject: Re: Feedback

Dear decider,

Be it whether you increase size of images to stop smokers or implement more DSP, as smokers all know, they can buy box to re-contain and throw away those printed box. An example as attached.

Once out of the house, they smoke along the corridor and who cares about going to those DSP. And on the road, people just smoke while walking to their next location and never bother about entering the DSP to smoke finish then continue the journey.
Logical and practical?

Stop thinking those useless ideas and waste the citizen's paid taxes like printing bigger images or building more DSP.

If smoking is killing, what about those increased number of vehicle on the road with COE drop?
Having more machine that emits more non-environmental friendly gases, why not talk about them instead?

1) suggestion: Increase the tax of cigarettes, and with it, use it to fund low to mid income families and take cares the aging population.
At the same time, clear all those transportation issues like MRT breakdown, increase of population with foreign talent ETC.

Having another question to ask: is there any incident where normal coffee shops are caught for selling beer after the known timing?
why i ask is because I do not see any police patrolling in the night near those "popular" 24hour coffee shops. Don't you think because of all these FTs given the local drinkers MORE hard time to relief stress in the nearby neighborhood coffee shop?

Logical & Practical?
