\* Preliminary figures, subject to revision when more information is available.

\*\* Wef Jan 2010, reporting has changed from all types of STIs to legally notifiable STIs, which comprise gonorrhoea, non-gonococcal urethritis, syphilis (congenital, infectious, non-infectious), chlamydia and genital herpes (first episode and recurrent).

\*\*\* Wef E-week 6 of 2012, the no. of polyclinic attendances will be reflected on an average daily basis, instead of weekly basis, so as to take into account the number of working days in an E-week at the polyclinics for a more accurate representation of the underlying trends in the community.

## Influenza Situation in Singapore 2017

Influenza indicators for E-week 17 (23 - 29 Apr 2017) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI decreased from 3,202 (over 5.5 working days) in E-week 16 to 3,189 (over 5.5 working days) in E-week 17.

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at 2.8%. The overall positivity rate for influenza among ILI samples (n=161) in the community was 46.0% in the past 4 weeks. Of the specimens tested positive for influenza in April 2017, these were positive for influenza B (38.8%), influenza A(H3N2) (27.5%), influenza A(H1N1)pdm09 (27.5%) and influenza A(subtype indeterminate due to low viral titre) (6.3%).
