Cardiac	Heart rhythm devices	Pacemaker	Single chamber leadless pacemaker	Medtronic	Micra TPS	Standalone	MC1VR01	DE0019240	• Leadless pacing should be considered in patients with a clear indication for bradycardia pacing or cardiac resynchronisation, and could be a reasonable option for patients with intermittent symptomatic bradycardia due to sick sinus syndrome since it can remove the need for atrial pacing lead; • Patient should have a clear and explicit reason such as prior CIED-related infections or poor vascular access documented for choice of single chamber leadless pacemaker over conventional transvenous pacemakers; and • Single chamber leadless pacemaker should not be used in patients who are contraindicated for leadless pacing, such as patient habitus and venous abnormalities likely to result in difficulties or complications from large sheaths required for device delivery.

Cardiac	Heart rhythm devices	Infection control	Antibacterial envelope	Medtronic	Tyrx with Medtronic Devices (Large)	Package	CMRM6133INT	DE0019441	Patients deemed to be at high risk of CIED-related infections based on: • patient-related risk factors such as end-stage renal disease, corticosteroid use, renal failure, history of device infection, COPD, >NYHA class II HF, malignancy, diabetes mellitus, fever prior to implantation, skin disorders, heparin bridging, and oral anticoagulants; • procedure-related risk factors such as device replacement or revision or upgrade, generator replacement, lead repositioning; or • device-related risk factors such as ICD, CRT-D, epicardial leads, abdominal pocket, ≥2 leads. Patients receiving permanent pacemaker and CRT-P should not receive subsidy for antibacterial envelope unless they have other high-risk factors for CIED infection.
