**Notes**

<sup>1</sup> Includes PRs and visitors residing in dorms. Breakdown of dorm cases into those detected through surveillance and those isolated before detection is not available before 24 Aug.

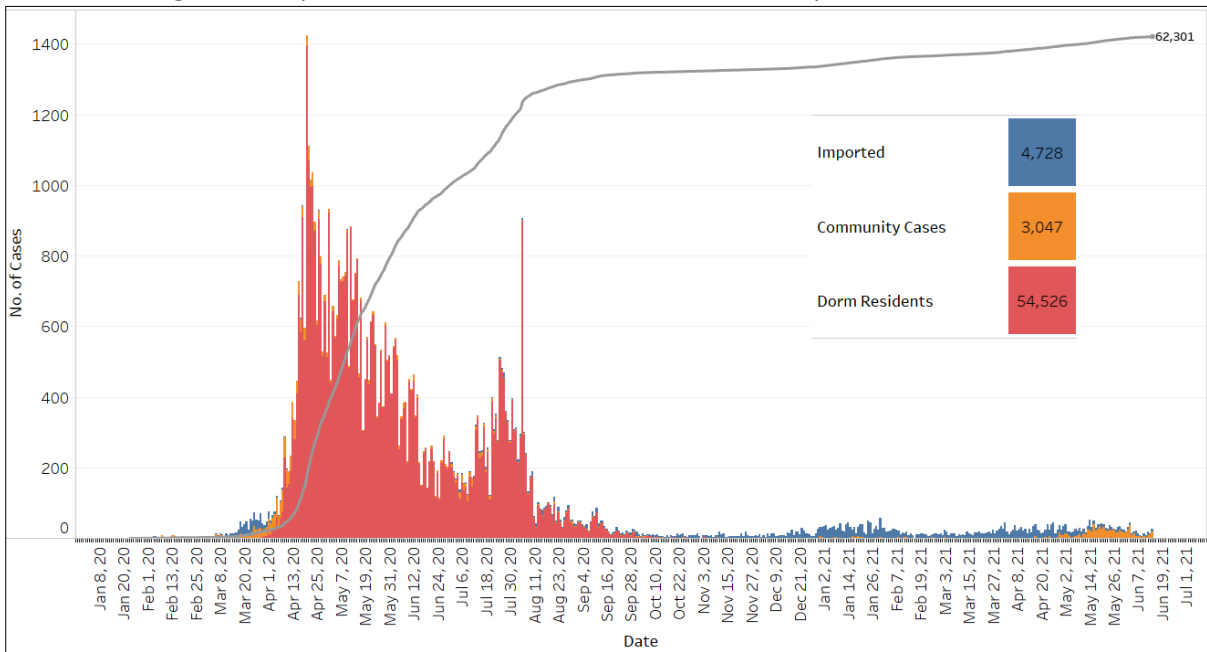

<sup>2</sup> 272 cases were reported before early Apr, and constitute the 1<sup>st</sup> wave of imported cases.

<sup>3</sup> Cases who were already quarantined and tested during quarantine to determine their status.

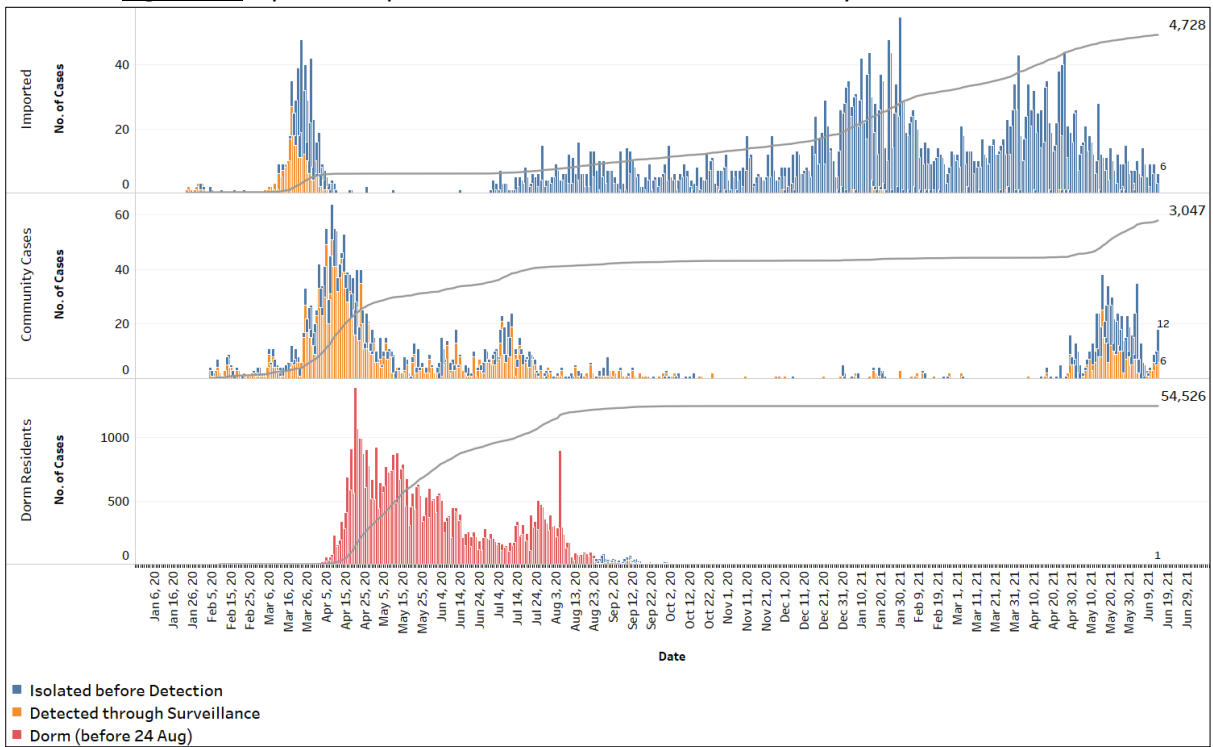

<sup>4</sup> Cases who were identified through surveillance testing, such as the bi-weekly Rostered Routine Testing (RRT) of at-risk workers and testing of those with Acute Respiratory Illness (ARI) symptoms.

<sup>5</sup> Incidence rates are rounded to two significant figures.

**Figure 1.7:** Average Number of Days from Onset of Symptoms to Isolation (QO, hospital admission or notification to MOH) for Community Cases Detected through Surveillance in Each Day

Line represents the 14-day moving average; Bar represents the daily average<sup>7</sup>

<sup>6</sup> Date of notification was used for cases that did not display any symptoms. The numbers with onset in the past few days may see an increase as more cases are notified.

<sup>7</sup> Area in grey demarcates data points for the past 3 days where some cases may still be pending epidemiological investigation. The bar graph shows the daily average number of days from symptoms onset to isolation, while the line graph shows the moving average for the past 14 days. Both graphs exclude cases with no onset date (asymptomatic) in the computation of the average. Community cases with symptoms who are isolated on the same day that symptoms occurred would have an isolation time of 0. There is a gap in the line graph from 16 to 18 Sep as there are no symptomatic cases in the preceding 14 days.

**Figure 1.8:** Weekly Reclassifications of Previously Reported Cases

	Imported	Community Linked	Community Unlinked	Dorm Residents	Total
<b>Total number of cases as at 07 Jun</b>	4,688	2,110	888	54,524	<b>62,210</b>
<b>Cases reported 08 Jun - 14 Jun</b>	40	33	16	2	<b>91</b>
<b>Net reclassifications of previously reported cases, incorporated 08 Jun - 14 Jun</b>	0	3	-3	0	<b>0</b>
<b>Total number of cases as at 14 Jun</b>	4,728	2,146	901	54,526	<b>62,301</b>

Case Number	PR date	Occupation	Link Reclassification	Rationale for Link Reclassification
63160	16 May 21	Food Processing Worker	Community Unlinked → Community Linked (Cluster 63160)	Case 63300 is the likely primary case of cluster 63160. He visited White Sands mall during the same period as other confirmed cases during their infectious period. Cases are phylogenetically linked to other cases linked to White Sands
63300	4 May 21	Unemployed	Community Linked (Cluster 63160) → Community Linked (White Sands)	
63271	16 May 21	Warehouse Assistant	Community Unlinked → Community Linked (Cluster 63271)	Case 63278 is the likely primary case of cluster 63271. He visited White Sands mall during the same period as other confirmed cases during their infectious period. Cases are phylogenetically linked to other cases linked to White Sands
63278	16 May 21	Financial Consultant	Community Linked (Cluster 63271) → Community Linked (White Sands)	
63534	21 May 21	Delivery Man	Community Unlinked → Community Linked (Cluster 63534)	Case 63534 is the likely primary case of cluster 63569. He visited White Sands mall during the same period as other confirmed cases during their infectious period. Cases are phylogenetically linked to other cases linked to White Sands

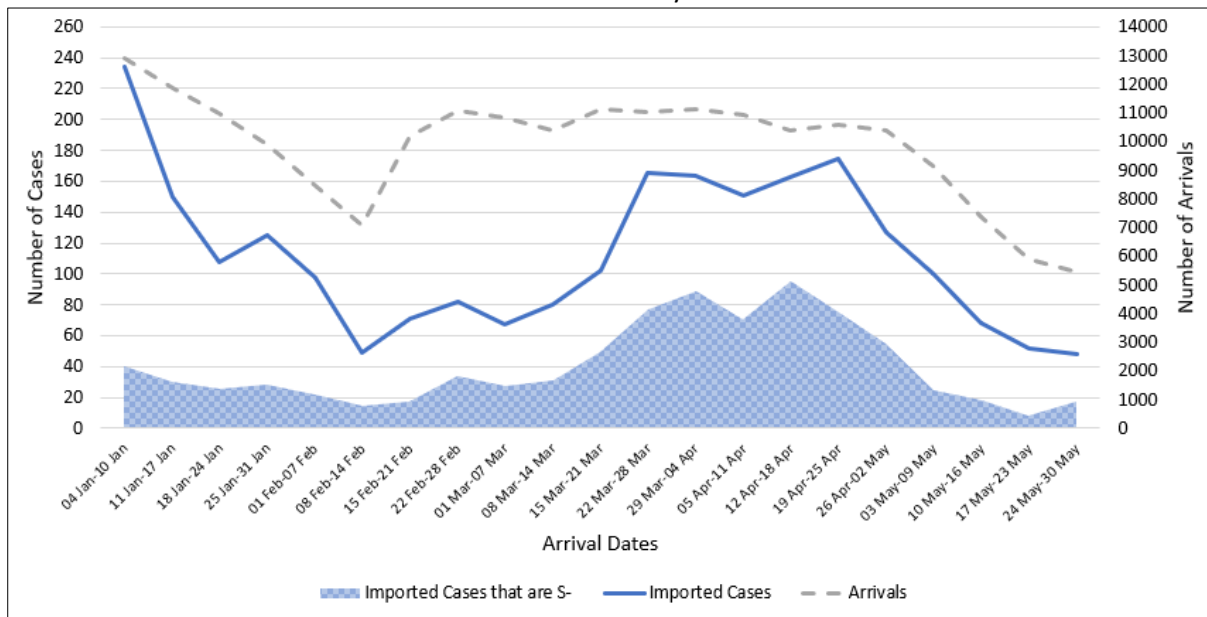

Case Number	PR date	Occupation	Link Reclassification	Rationale for Link Reclassification
63569	22 May 21	Delivery Man	Community Linked (Cluster 63534) → Community Linked (White Sands)	

**(2) Imported COVID 19 Cases**

**Figure 2.1:** Serology and Symptom Status of Imported Cases Reported from 1 Jun to 7 Jun

Symptoms	S+	S-	Not Serology Tested	Pending Serology Result	Total No. of Cases
Asymptomatic	38	12	0	1	51
Symptomatic	2	1	0	0	3
<b>Total</b>	<b>40</b>	<b>13</b>	<b>0</b>	<b>1</b>	<b>54</b>

**Figure 2.2:** Weekly Total Number of Imported Cases, Imported Cases that are S and Arrivals from 4 Jan 21 to 30 May 21<sup>8</sup>

<sup>8</sup> Data from the past 2 weeks are excluded as arrivals on SHN who arrived in the past 2 weeks may not have their SHN exit test results yet. "Imported Cases that are S-" comprises imported cases who are (a) serology negative; or (b) not tested for serology. "Imported Cases with Ct values 30 and below" have low Ct values which are suggestive of high viral load. Notwithstanding, Ct values should be interpreted with caution along with other epidemiological and clinical factors.

**(3) Number of COVID 19 Cases in Hospitals and Community Care Facilities****Figure 3.1:** Summary of Confirmed Cases by Status in the Past 14 Days
