(2) Community COVID-19 Cases

Figure 2.1: Average Number of Days from Onset of Symptoms to Isolation (QO, hospital admission or notification to MOH) for Community Cases Detected through Surveillance in Each Day *Line represents the 14-day moving average; Bar represents the daily average*²

(3) Imported COVID-19 Cases

Figure 3.1: Serology and Symptom Status of Imported Cases Reported from 8 Aug to 14 Aug

| Symptoms | S+ | S- | Not Serology Tested | Pending Serology Result | Total No. of Cases |
|--------------|----|----|------------------------|----------------------------|-----------------------|
| Asymptomatic | 6 | 5 | 0 | 1 | 12 |
| Symptomatic | 2 | 2 | 0 | 0 | 4 |
| Total | 8 | 7 | 0 | 1 | 16 |

² Area in grey demarcates data points for the past 3 days where some cases may still be pending epidemiological investigation. The bar graph shows the daily average number of days from symptoms onset to isolation, while the line graph shows the moving average for the past 14 days. Both graphs exclude cases with no onset date (asymptomatic) in the computation of the average. Community cases with symptoms who are isolated on the same day that symptoms occurred would have an isolation time of 0. There is a gap in the line graph from 16 to 18 Sep as there are no symptomatic cases in the preceding 14 days.
