Influenza Situation in Singapore 2016

Influenza indicators for E-week 2 (10 - 16 Jan 2016) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI increased from 2,604 (over 5.5 working days) in E-week 1 to 2,775 (over 5.5 working days) in E-week 2.

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at approximately 1%.

The overall prevalence of influenza among ILI samples (n=120) in the community was 55.0% in the past 4 weeks. Of the specimens tested positive for influenza in December 2015, these were positive for influenza A(H3N2) (50.0%), influenza B (33.3%), and influenza A (H1N1)pdm09 (16.7%).

* Based on influenza-like illness (ILI) samples from GPs and polyclinics
