Influenza Situation in Singapore 2016

Influenza indicators for E-week 13 (27 Mar - 02 Apr 2016) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI decreased from 2,596 (over 4.5 working days) in E-week 12 to 2,530 (over 5.5 working days) in E-week 13.

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at approximately 1%.

The overall prevalence of influenza among ILI samples (n=198) in the community was 54.5% in the past 4 weeks. Of the specimens tested positive for influenza in March 2016, these were positive for influenza B (72.9%), influenza A (H1N1)pdm09 (21.4%), and influenza A(H3N2) (5.7%).

* Based on influenza-like illness (ILI) samples from GPs and polyclinics
