\* Preliminary figures, subject to revision when more information is available.

\*\* Wef Jan 2010, reporting has changed from all types of STIs to legally notifiable STIs, which comprise gonorrhoea, non-gonococcal urethritis, syphilis (congenital, infectious, non-infectious), chlamydia and genital herpes (first episode and recurrent).

\*\*\* Wef E-week 6 of 2012, the no. of polyclinic attendances will be reflected on an average daily basis, instead of weekly basis, so as to take into account the number of working days in an E-week at the polyclinics for a more accurate representation of the underlying trends in the community.

## Influenza Situation in Singapore 2017

Influenza indicators for E-week 4 (22 - 28 Jan 2017) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI decreased from 3,060 (over 5.5 working days) in E-week 3 of 2017 to 3,002 (over 5 working days) in E-week 4.

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at 1.5%. The overall positivity rate for influenza among ILI samples (n=101) in the community was 49.5% in the past 4 weeks. Of the specimens tested positive for influenza in January 2017, these were positive for influenza A(H3N2) (68.0%), influenza B (24.0%) and influenza A (H1N1)pdm09 (8.0%).
