Influenza Situation in Singapore 2017

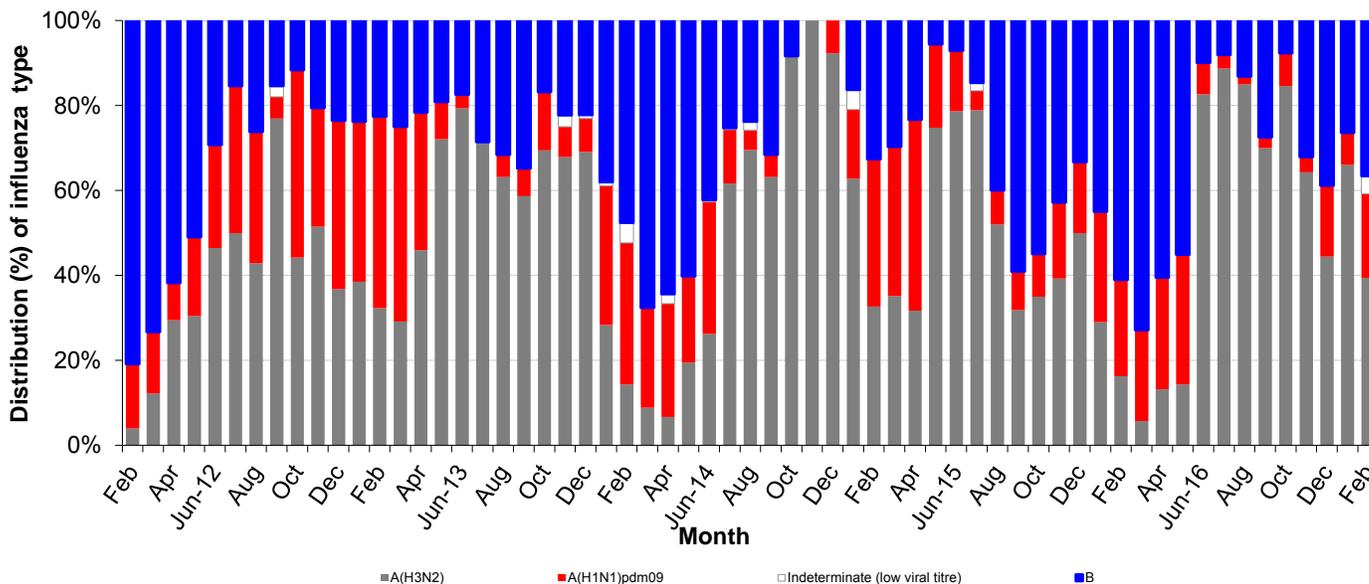

Influenza indicators for E-week 12 (19 - 25 Mar 2017) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI increased from 2,711 (over 5.5 working days) in E-week 11 to 2,977 (over 5.5 working days) in E-week 12.

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at 1.8%. The overall positivity rate for influenza among ILI samples (n=142) in the community was 50.0% in the past 4 weeks. Of the specimens tested positive for influenza in February 2017, these were positive for influenza A(H3N2) (39.4%), influenza B (36.6%), influenza A(H1N1)pdm09 (19.7%) and influenza A(subtype indeterminate due to low viral titre) (4.2%).
