*** Wef E-week 6 of 2012, the no. of polyclinic attendances will be reflected on an average daily basis, instead of weekly basis, so as to take into account the number of working days in an E-week at the polyclinics for a more accurate representation of the underlying trends in the community.

Influenza Situation in Singapore 2017

Influenza indicators for E-week 13 (26 Mar - 1 Apr 2017) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI decreased from 2,977 (over 5.5 working days) in E-week 12 to 2,839 (over 5.5 working days) in E-week 13.

Polyclinic Attendances for Acute Respiratory Infection

Average daily no.

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI remained low at 2.0%. The overall positivity rate for influenza among ILI samples (n=144) in the community was 53.5% in the past 4 weeks. Of the specimens tested positive for influenza in March 2017, these were positive for influenza B (47.1%), influenza A(H3N2) (25.3%), influenza A(H1N1)pdm09 (25.3%) and influenza A(subtype indeterminate due to low viral titre) (2.3%).
