Updated case counts due to change in case definitions w.e.f. 1 Jan 2018

Influenza Situation in Singapore 2018

Influenza indicators for E-week 25 (17 Jun - 23 Jun 2018) are as follows:

The average daily number of patients seeking treatment in the polyclinics for ARI increased from 2,403 (over 4.5 working days) in E-week 24 to 2,597 (over 5.5 working days) in E-week 25.

The proportion of patients with influenza-like illness (ILI) among the polyclinic attendances for ARI is 1.4%.

The overall positivity rate for influenza among ILI samples (n=183) in the community was 21.9% in the past 4 weeks. Of the specimens tested positive for influenza in May 2018, these were positive for influenza A(H1N1)pdm09 (78.5%), influenza B (13.8%) and influenza A(H3N2) (6.2%). 1.5% of the influenza A specimens were untypable due to low viral titre.

Based on influenza-like illness (ILI) samples from GPs and polyclinics
